NATIONAL REGISTER OF HISTORIC PLACES  
REGISTRATION FORM

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "X" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property

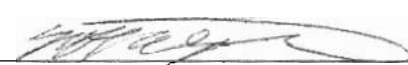

historic name Holmes Run Acres Historic District  
other names/site number DHR File No. 029-5183

2. Location

street & number Area generally bounded by Gallows Road to the south, Surrey Lane to the east, and  
Holmes Run Drive to the north and west. not for publication NIA  
city or town Falls Church vicinity X  
state Virginia code VA county Fairfax code 059 zip code 22043

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act, as amended, I hereby certify that this X nomination  
request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places  
and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property X meets does not  
meet the National Register Criteria. I recommend that this property be considered significant \_\_\_ nationally \_\_\_ statewide X locally.  
(See continuation sheet for additional comments.)

## 8. Statement of Significance

=====

**Applicable National Register Criteria** (Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- ☐ A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- ☐ B Property is associated with the lives of persons significant in our past.
- ☒ C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- ☐ D Property has yielded, or is likely to yield information important in prehistory or history.

**Criteria Considerations** (Mark "X" in all the boxes that apply.)

- ☐ A owned by a religious institution or used for religious purposes.
- ☐ B removed from its original location.
- ☐ C a birthplace or a grave.
- ☐ D a cemetery.
- ☐ E a reconstructed building, object, or structure.
- ☐ F a commemorative property.
- ☒ G less than 50 years of age or achieved significance within the past 50 years.

**Areas of Significance** (Enter categories from instructions)

Architecture

Community Planning and Development

**Period of Significance** 1951–1958

**Significant Dates** 1951

**Significant Person** (Complete if Criterion B is marked above) N/A

**Cultural Affiliation** N/A

**Architect/Builder** Donald Lethbridge and Nicholas Satterlee, architects  
Gerald Luria and Eli Luria, developers

**Narrative Statement of Significance** (Explain the significance of the property on one or more continuation sheets.)

**7. Narrative Description**

**Summary Description**

The Holmes Run Acres Historic District, a modern-style suburban housing development constructed between 1951 and 1958, comprises over three hundred single-family houses, a school, a recreation center and pools, and a park. The community is located off of Gallows Road in Fairfax County, Virginia. The rectangular one- and two-story houses were designed to be affordable, and easy and quick to construct using a modular system of standardized parts. They featured an open plan, plywood panels, fixed glass, and sliding windows. Holmes Run Acres was a departure from the more-prevalent colonial-style postwar subdivisions, both in the style of the houses and their relation to the landscape. The houses in Holmes Run Acres were sited to be in harmony with the natural terrain and surroundings. The dwellings are staggered along heavily wooded lots with large trees and are arranged on the individual quarter-acre lots in a way that takes full advantage of the landscape and provides maximum privacy. The curvilinear design of the streets also accentuates the natural elements of the area. The 354 buildings are composed of primary resources, including dwellings, a school, and a concession building; and secondary resources, including garages, sheds, a pool pump house, a restroom facility, and trailers and offices at the school. Although a number of the buildings have been modified, the district still possesses a high level of integrity and maintains its modern-style suburban character.

**Detailed Description**

The landscape of Holmes Run Acres is the prime component of the subdivision. Holmes Run Acres began as a 135-acre abandoned farm that consisted of “cleared fields and rolling wooded terrain”.<sup>1</sup> Photos taken during construction show the land was cleared of most trees, with only some trees dotting the landscape. Over time, the trees have matured and new ones were added, resulting in the current landscape.<sup>2</sup> The house siting is based on exposure, the view from the dwelling, privacy for the residents, and variation. A one-story house often appears on a flat or gently sloping lot, while a two-story dwelling is often located on hillside lots or lots with dramatic slopes. The one-story dwelling may have an attached or a separate carport, and the two-story dwelling may contain either an internal garage or an attached or independent carport. The exact location of the carport differs from house to house to avoid a uniform appearance in the neighborhood. In addition, the roof of the carport may be either shed or flat, making each property look unique.<sup>3</sup> Privacy is an issue for most residents in Holmes Run Acres because of the small lots of the development. For this reason many dwellings in Holmes Run Acres are angled on the lot, providing optimal privacy and views. The architects were also able to create privacy through both the natural landscape and constructed elements. The architects, Satterlee and Lethbridge, used the existing trees on the property, graded some of the lots to create a physical barrier, and when necessary, placed short sections of wood fences on the lots. Additional wood fencing was made available to Holmes Run Acres homeowners; it came in 24-foot-long sections in a choice of three coordinating finishes.<sup>4</sup>

The names of the streets in Holmes Run Acres—Sycamore Drive, Holly Court, Laurel Court, and Cypress Drive—emphasize the nature theme that runs throughout the subdivision. The Gaddy addition to Holmes Run Acres continues the nature premise with road names such as Sherwood Court.

**Section** 7 **Page** 2

Landscaping continues to be an integral element of the Holmes Run Acres subdivision. Current residents of Holmes Run Acres often employ the expertise of landscape architects to create designs that take full advantage of the intricacies of the land, a major theme of the original architects. These include the construction of terraces, additional fencing and shrubbery for privacy, as well as rock gardens and ponds. Concrete curbs and gutters are visible throughout the neighborhood. Sidewalks, however, are noticeably absent from the Holmes Run Acres landscape with the exception of those in front of the Woodburn School and along Gallows Road. The residents of the subdivision fought against the installation of streetlights and sidewalks from the 1950s until the present, stating that they would ruin the natural beauty of the land.<sup>5</sup>

**House Types**

There are four general types of houses in Holmes Run Acres; the one-story Luria, two-story Luria, Gaddy, and Bodor. The names refer to the builders who constructed them. All are of frame construction sheathed in contrasting materials of wood and brick. The one-story dwellings are rectangular in shape, and each home sits differently on the lot to take full advantage of the landscape and to provide maximum privacy. The two-story dwellings may be built into the land or stand independently, depending on the natural characteristics of the lot. The dwellings often contain massive, brick chimneys that appear to anchor the structure. Windows dominate the façade of the Holmes Run Acres home, inundating the interior with natural light. The windows on the remaining elevations of the dwelling are smaller, providing much-desired privacy. The roofs of the Holmes Run Acres home are either shed or gable and were originally covered with poured pebble asphalt. The modular quality and post-and-beam construction of the Holmes Run Acres home offers the owner the opportunity to make additions to the structure as necessary. Sympathetic additions to the dwellings in the neighborhood are the hallmark of the Holmes Run Acres Historic District.

One-Story Luria House, 1951–1952

The one-story, frame dwelling is sheathed in contrasting materials of board (vertical or horizontal) and brick on a solid brick foundation. The wood, fixed windows are rectangular in shape. There is a common-bond, brick, interior chimney. The one-story, one-bay porch has square wood posts. The broad, low-pitch, gable roof features wide eave overhangs and is covered in poured pebble asphalt.

The one-level house had two bedrooms, one bathroom, and an optional third bedroom or study, with a total of 902 square feet of space. The one-story dwellings had an open floor plan with movable partitions allowing the residents to alter the interior as they saw fit.<sup>6</sup> The one-story dwelling may have an attached or a separate carport. The enclosing of the garage or carport is the most common alteration to a one-story dwelling. A one-story house was often built on a flat or gently sloping lot.

Two-Story Luria House, 1951–1952

The two-story, frame dwelling is covered in contrasting materials of vertical board and brick veneer on a brick foundation. The rectangular-shaped, wood windows on the second floor are fixed, while the wood, one-over-one-light windows on the first and second floors are double-hung sash. The porch stoop is concrete with no roof. The low-pitch gable roof features wide eave overhangs and is covered in poured pebble asphalt.

The floor plan for the one-story Luria dwelling composed the upper floor of the two-story plan, while the bottom floor

=====

contained either two rooms and a garage or three rooms with approximately 1,800 square feet. A Luria two-story home may have a garage on the first floor of the house, no garage, or a detached garage. The two-story dwellings may be built into the land or stand independently, depending on the natural characteristics of the lot. A two-story dwelling was often constructed on hillside lots or lots with dramatic slopes. The two-story dwelling may contain either an internal garage or an attached or independent carport. The enclosing of the garage or carport is the most common alteration to a two-story dwelling.

Gaddy House, 1954–1955

This two-story, frame dwelling is covered in contrasting materials of vertical board and brick veneer on a brick foundation. With approximately 1,976 square feet, this house is essentially a larger version of the two-story Luria house design. The original plan allowed for two bedrooms, a living room, a larger separate dining area, a kitchen, and a full bath on the upper or main level. A narrow wooden deck/walkway was accessed from the living room door. The lower level contained two bedrooms, a full bathroom, a family/recreation room, a laundry utility room, and a recessed entryway at the front of the house. A carport originally was attached to the side of the house. Some carports have been enclosed.

Bodor House, 1957–1958

The dwellings in the last section to be built, known as the Bodor addition, continue to use the same contemporary architectural idiom but have slight differences. All appear to be two-story, have shallow-pitched gable roofs, and use contrasting materials such as brick, wood, and glass. The most noticeable change is the entry, with large windows immediately adjacent to and above the first-floor door.

The original Bodor houses were larger than those built by the Luria Brothers and Gaddy. There were two models, one 30 by 38 feet and one expanded to 30 by 40 feet, for a total of 2,400 square feet. The larger model had a living room, a separate dining area, and an eat-in kitchen on the upper (main) level. The smaller model had a combined living/dining room and a galley kitchen. Both models offered three bedrooms on the upper level and a fourth bedroom on the lower level. The lower level also contained a recreation room, a bathroom, and unfinished utility space. The houses featured a larger carport than the Gaddy and Luria homes and a screened porch at the rear of the carport.<sup>7</sup> Like the other two-story houses, these dwellings are frequently sited on sloping lots to take advantage of the terrain.

**Other Resources**

The Holmes Run Acres Historic District also includes the Woodburn School, the Holmes Run Acres Recreation Center, and Luria Park.

The Woodburn School, constructed in 1953, sits on 10 acres at the corner of Gallows Road and Hemlock Drive; sidewalks to the south and west of the building provide access. It was built in a style sympathetic to the architecture of Holmes Run Acres for the children of residents of the subdivision. Two additions were made to the school, one in 1954 and another in 1957. There was an additional renovation in 1974–1975.<sup>8</sup>

The Holmes Run Acres Recreation Center, constructed in 1952–53, is centrally located along Gallows Road. A

=====

concrete sidewalk provides access from the neighborhood to the recreation center, which consists of two, large, concrete pools, one small children's concrete pool, a basketball court, a picnic area, a restroom and shower facility, and a storage shed.<sup>9</sup>

Luria Park, consisting of 4.2 acres, is located in the northeast corner of the Holmes Run Acres development with entrances from the intersection of Holmes Run Drive and Executive Drive and from Hartwell Court. The area closest to the major access points consists of a large open area with a basketball court, and baseball and softball areas. Gravel paths run along the southern edge of Luria Park. A majority of the park consists of wetlands and has been left in a natural state. Luria Park was part of the original parcel of land purchased by the Luria Brothers in the early 1950s.<sup>10</sup>

**Inventory**

The inventory is organized alphabetically by street and then numerically by address. Each house is identified by house type. Features particular to each house, including setting, as well as additions and alterations, are noted.

This one-story dwelling has an unsympathetic addition and alteration. The addition is on the left side elevation of the house. It is constructed of wood framing, is clad in weatherboard siding, and has a gable roof. The addition is fenestrated by a fixed wood-sash window. The original carport was altered into a garage, which is clad in weatherboard siding and has a front gable roof.

Primary Resource Information: Park

Luria Park is a 4.2-acre park located to the northeast of the Holmes Run Acres subdivision. The park consists of both open space used for recreational activities and a heavily wooded area. The open area of the park contains a blacktop area that is used as a basketball court as well as areas for baseball and softball. A playground and picnic area is north of the basketball court. The remainder of the park consists primarily of marshland. A wood bridge with pipe railings

**8. Narrative Statement of Significance**

**Summary Statement of Significance**

Holmes Run Acres, a suburban housing development constructed between 1951 and 1958 in Fairfax County, Virginia, is eligible for the National Register of Historic Places under Criterion C in the areas of architecture and community planning and development. Holmes Run Acres was dramatically different from most other housing developments of the 1950s in Northern Virginia. It differed in two vital ways—the modern-style dwellings and the design of the neighborhood. The developers, brothers Gerald and Eli Luria, created a subdivision with affordable houses that was in harmony with nature and took advantage of the natural terrain and surroundings. The Lurias hired architects Nicholas Satterlee and Donald Lethbridge to design small, inexpensive, houses consisting of standardized building features and modules that made the buildings adaptable to fit the needs of the architects and the homeowners, as well as the landscape and building codes. Influenced by the principles of Frank Lloyd Wright's Usonian dwellings, the architects designed the houses in a modern style, at a time when the Ranch and Colonial Revival styles were much more popular in most suburban communities of the 1950s in the area. The architects also were responsible for the layout of the streets and lots, the siting of each house, the finishes and colors for both the exterior and interior of the residences, and supervision of construction.<sup>1</sup> Both diversity and privacy were achieved by thoughtful placement of each house and use of varied finish materials. The architect-designed layout of the streets, the use of landscaping, the retention of natural features, and the siting of the houses to take optimum advantage of these elements were features not found in most tract developments. These qualities make Holmes Run Acres a locally significant example of post-World War II community planning and architecture and contribute to its historic significance and eligibility for inclusion in the NRHP. Although the last phase of the development of Holmes Run Acres has not reached the standard 50-year age requirement, the majority of the community was built during the initial phase of development that occurred during 1951–1952. Therefore, the entire development has been included within the proposed boundaries, under Criterion Consideration G with a period of significance from 1951 to 1958.

**Historical Background**

At the beginning of the 20th century, Fairfax County was predominantly agricultural. However, with the advent of the electric train and the automobile, this quickly changed. In 1900, most of the residents of Fairfax County were farmers; by 1925 a majority of the residents of the county lived in urban areas. The economic depression and droughts of the 1930s, coupled with the expanding government and the promise of jobs in Washington, D.C., greatly reduced the number of farms in Fairfax County.<sup>2</sup> Following World War I the railroad industry in Fairfax County fell into decline resulting from labor problems and difficulty obtaining materials. People were becoming more reliant on the automobile and began to put pressure on the government to build better roads. To pay for these new roads, the state of Virginia instituted the license and gasoline taxes. In 1930, the license tax produced \$6,564,000 in revenues and the gasoline tax \$7,251,000. The construction of new roads was further bolstered by the passage of the Federal Aid Highway Act of 1944.<sup>3</sup> The persistent construction of highways and interstates, in conjunction with the postwar building boom, cemented Fairfax County's role as a bedroom community of the nation's capital and the creation of the freeway suburb. The need to create housing for returning soldiers and their families became a top priority for both the government and developers. The Veterans Administration instituted a loan-guarantee program that made houses attainable for returning soldiers.<sup>4</sup> The future of the Washington, D.C., suburb was sealed with the construction of the

=====

Capital Beltway, Interstate 495, in 1958. In 1958 Robert C. Burton of the University of Richmond and Frederick D. Knapp of the University of Virginia began a study to determine the ramifications of the Capital Beltway. Burton and Knapp stated that the beltway provided cohesion to the regions of Northern Virginia and would result in a striking increase in the number of single-family and multifamily dwellings in and around the interstate. Fairfax County is no longer the agricultural community it once was, but a bedroom community of the nation's capital. The continued construction of roads, the building of Dulles Airport, and the development of service industries in and around northern Virginia now define Fairfax County.<sup>5</sup>

The Holmes Run Acres development mirrors the trend in the second half of the 20th century to construct more accessible housing for Americans. The prolific use of the automobile, new construction of highways and interstates, the baby boom, and the unparalleled housing shortage following World War II resulted in the creation of the "freeway suburbs".<sup>6</sup> The notion of owning a freestanding house was once reserved for only the wealthy; now middle-class citizens could also pursue this dream. The federal government assisted individuals in attaining their dream home by providing mortgage insurance for future homeowners through the Federal Housing Administration and loan guarantees through the Veterans Administration. The result was overwhelming, with the number of new houses in the United States jumping from 114,000 in 1944 to 1,692,000 in 1950. These new subdivisions were different in a variety of ways from the housing developments of the late 19th and early 20th centuries. The new neighborhoods of the mid-20th century were on the periphery of the city, architecturally similar, and homogeneous both racially and economically.<sup>7</sup>

An example of such a neighborhood is Pimmit Hills, a housing development in Fairfax County. Construction began in Pimmit Hills in 1952, and the development contains approximately 1,650 homes. A Pimmit Hills house consisted of a designer-built house with a large picture window that looked across the street to a stylistically similar dwelling.<sup>8</sup> The lots in Pimmit Hills are somewhat graded and generally lack any decorative landscaping. All dwellings in Pimmit Hills are arranged so that the front of the house is orientated toward the street. The standard Pimmit Hills home is a one-story, frame structure with a wide overhanging eave, a projecting gable entrance, a gabled entrance, or a flush roofline with a wide overhanging eave above the entrance. Some of the dwellings in this neighborhood have experienced some radical alterations over the years including conversion to a two-story house and the addition of modern stylistic elements. However, the most common modification appears to be a shed-roofed addition along the rear of the dwelling.

The Holmes Run Acres community was the brainchild of Gerald and Eli Luria, two builders from Arlington, Virginia, who wanted to "build something better than the rows of monotonous suburban houses" such as Pimmit Hills.<sup>9</sup> The Lurias formed their partnership, the Luria Brothers, in 1945. This was the Luria Brothers' first step into the field of real estate development. Gerald Luria was a jeweler, and Eli Luria was an investor who possessed some experience in apartment house development. The Luria Brothers' first housing venture, Waverly Village in Arlington, consisted of only 33 brick two-story colonial and one-story rambler dwellings. These particular housing styles were very popular in post-World War II America, and the brothers met with great success. In 1949 the Lurias purchased 32 lots in Arlington for their Garden City development. This subdivision consisted of one-story ramblers with a low-pitch roof and large picture windows. Other Luria Brothers developments include Jonstown, Marshall Park, Sycamore Grove, and Sleepy Hollow Knoll in Arlington County. In 1950, the Luria Brothers purchased a 135-acre tract of farmland in Fairfax County. The property originally belonged to Herman Schmidt, a Washington investor, who purchased the

**Section** 8 **Page** 68

land in 1945 and identified the tract as Holmes Run Acres.<sup>10</sup> The topography of this property consisted of cleared fields with sections of rolling woods. For their new project in Fairfax County, the Luria Brothers were ready to try something different. Greatly influenced by the design philosophy of Frank Lloyd Wright, the Luria Brothers decided to integrate more elements of modern architecture into the homes of Holmes Run Acres. The Lurias wanted to create a subdivision with affordable dwellings that were in harmony with nature and took advantage of the natural terrain and surroundings.<sup>11</sup>

To realize their dream, the Luria Brothers hired architects Nicholas Satterlee and Donald Lethbridge in 1951 to design this new subdivision of contemporary houses. Lethbridge and Satterlee had worked together before at the firm of Berla & Able. Lethbridge received his training at the Yale University School of Architecture; after graduating in 1947 he came to Washington, D.C., to work with his brother, an investor. Lethbridge's work before his tenure with the Luria Brothers consisted primarily of designing individual houses for private owners. The Lurias give Donald Lethbridge credit for the idea to build homes that incorporate modern elements. Satterlee completed his education at Harvard's Graduate School of Design and then worked from 1946 to 1948 for Berla & Able. In addition to his work with the firm of Berla & Able, Satterlee also worked for the Northern Virginia firm of Burket, Neufeld, and DeMars. Satterlee in particular had a reputation for his skill as an illustrator, his design of residential buildings, and the rehabilitation of historic landmarks. Satterlee and Lethbridge jumped at the chance to design Holmes Run Acres because of the size of the project and the opportunity to incorporate modern architectural design into domestic structures.<sup>12</sup>

Holmes Run Acres was a departure from traditional housing developments not only in its contemporary design but also in the roles that Satterlee and Lethbridge played in the construction of the subdivision. Satterlee and Lethbridge were responsible for the design of the dwellings, the layout of the streets and lots, the siting of each house, the finishes and colors for both the exterior and interior of the residences, and supervision of the building of the houses.<sup>13</sup> Satterlee and Lethbridge designed five variations of one- and two-story houses for the subdivision. The Holmes Run Acres one-story houses consisted of 902 square feet, and two-story houses had approximately 1,800 square feet. The one-level house had two bedrooms, one bathroom, and an optional third bedroom or study. The floor plan for the one-story dwelling composed the upper floor of the two-story plan, while the bottom floor contained either two rooms and a garage or three rooms. The interior of the Holmes Run home was just as unique in design; the prolific use of glass and exposed wood helped to create an indoor-outdoor feeling. The one-story dwellings had an open floor plan with movable partitions allowing the residents to alter the interior as they saw fit.<sup>14</sup> The design of the Holmes Run Acres dwelling easily lends it to additions and remodeling. The architects used post-and-beam construction, a design characteristic that facilitates alterations to the original structure. This allows the homeowner to create a dwelling that meets the individual needs of a growing family and that is uniquely individual.<sup>15</sup> The Luria Brothers' goal to construct affordable housing was achieved—a one-story dwelling cost \$13,750 and a two-story house ranged from \$16,900 to \$17,450.<sup>16</sup> The dwellings in Holmes Run Acres are typical of the Usonian dwellings associated with Frank Lloyd Wright. That is, these dwellings are small, inexpensive, and consist of standardized building features and modules that made the buildings adaptable to fit the needs of the architects and the homeowners, as well as the landscape and building codes. The main tenet of Frank Lloyd Wright's architectural design was to create a structure that was "sensitive to [the] climate, orientation, and site conditions."<sup>17</sup>

=====

The architects of Holmes Run Acres were able to avoid the cookie-cutter arrangement so often associated with post-World War II subdivisions by varying the placement of the houses and carports on the lots. The terrain of the lot was the primary factor used to determine the type of house placed on the lot. The architects determined the house siting based on exposure, the view from the dwelling, privacy for the residents, and variation. A one-story house was often built on a flat or gently sloping lot, while a two-story dwelling was often constructed on a hillside lot or a lot with dramatic slopes. Privacy was an issue for the prospective owner of a Holmes Run Acres home because of the small size of the lots. However, the architects were able to create privacy through the natural landscape and manmade elements. Satterlee and Lethbridge used the existing trees on the lots, graded some of the lots to create a physical barrier, and when necessary, placed short sections of wood fencing on the lots. Additional wood fences were available to Holmes Run Acres homeowners. These fences came in 24-foot-long sections in a choice of three finishes.<sup>18</sup> The one-story dwelling may have had an attached or separate carport, and the two-story dwelling contained either an internal garage or an attached or independent carport. Over the years these carports and garages were often enclosed to create new rooms and more space within the Holmes Run Acres dwelling.<sup>19</sup> Other efforts made by Satterlee and Lethbridge to avoid a uniform appearance include angling the houses on the lots, using either a flat or shed roof on the carport, and varying the location of the carport on the lot.<sup>20</sup>

Holmes Run Acres was built in three phases over a seven-year period. The first phase completed by the Luria Brothers was constructed between 1951 and 1952 and consisted of approximately 260 houses. In 1954–55, builders Gaddy and Gaddy undertook the second phase of Holmes Run Acres and built 71 additional homes. The Gaddy and Gaddy addition to Holmes Run Acres also used architects Satterlee and Lethbridge, thus maintaining the architectural standard set by the original builders. Andre Bodor purchased the last lots of Holmes Run Acres from Gaddy and Gaddy in 1957, and in 1958 completed construction of the final homes in the subdivision.<sup>21</sup>

The residents of Holmes Run Acres are as unique as the dwellings themselves. The Civic Association was founded in 1952 and remains an incredibly viable organization. It maintains a publication, the *Holmes Runner*, that is distributed nine times a year. The Holmes Run Acres Civic Association was responsible for the first area preschool, was the first to petition for bus service on Gallows Road, and serves as an example for other community organizations throughout Fairfax County.<sup>22</sup> The individuals who call Holmes Run Acres home are, for the most part, well educated and represent a variety of backgrounds and occupations. The March 1969 issue of the *Holmes Runner* stated that with the exception of military and government jobs, the most common profession among Holmes Run Acres residents was architect.<sup>23</sup>

The Woodburn School was built in a style sympathetic to the architecture of the subdivision for the children of the residents of Holmes Run Acres. The population explosion that occurred in both Fairfax County and Holmes Run Acres resulted in massive overcrowding in the county school system. To alleviate some of the overcrowding, Fairfax County built the Woodburn School in 1953; however the school was already operating at full capacity on the first day it opened its doors. Therefore, two additions were made to the school, one in 1954 and another in 1957. There was an additional renovation in 1974–1975. Holmes Run Acres residents took an immediate interest in the new school; in fact, the first president of the Woodburn PTA lived in Holmes Run Acres. In addition, the residents of Holmes Run Acres raised the funds for fencing around the school, constructed the baseball field, and are responsible for a large part of the landscaping at the Woodburn School.<sup>24</sup>

=====

The notion of the Holmes Run Acres Recreation Center began in the summer of 1952. The residents of Holmes Run Acres decided that their neighborhood needed a community swimming pool, a new concept in Fairfax County, so new in fact that the county had no regulations governing such a project. However, through the tenacity of the Holmes Run Acres community, the idea gained more interest, and a recreation center was built. The Holmes Run Acres Recreation Center opened on Labor Day 1953; it featured the first community-built pool in the Northern Virginia/Washington, D.C. area. The facility had not yet been landscaped, so the Holmes Run Acres Garden Club developed a landscaping plan. Membership to the recreation association quickly soared, and by 1959 the Board of Directors realized that another pool was necessary to meet the demand. The additional pool was completed in 1960. The Holmes Run Acres Recreation Center currently offers swimming lessons, diving classes, and life-saving classes, and supports the Holmes Run Acres Recreation Association swim team, the Hurricanes.<sup>25</sup>

Luria Park was part of the original parcel of land purchased by the Luria Brothers in the early 1950s. The land was determined unsuitable for building, so the Luria Brothers donated the land to Fairfax County. In 1954, the *Holmes Runner* published an article stating that the Holmes Run Acres Garden Club wished to develop the land into a park. Luria Park resulted from the joint venture between the Holmes Run Acres Civic Association and Fairfax County, an unusual linkage between private and public groups. The county maintains the park through mowing the grass, collecting trash, and other general maintenance tasks; however it is the residents of Holmes Run Acres that provide the equipment and facilities.<sup>26</sup>

The unique nature of the dwellings of Holmes Run Acres did not go unnoticed by the press and public. Articles appeared in a variety of publications touting the virtues and economical value of the Holmes Run Acres home. Publications such as *House Beautiful* stated that the Holmes Run Acres home was "a good example to use as a standard" for a new home.<sup>27</sup> Other periodicals that have published articles on Holmes Run Acres include *American Institute of Architects Journal* and *Architectural Forum*. All articles comment on the distinctive nature of Holmes Run Acres and its novel concept of blending modern architecture with nature.<sup>28</sup>

Holmes Run Acres proved to be such a success for the Luria Brothers that in 1952 they began construction on a new development, Pine Spring, located two miles north of Holmes Run Acres between Lee Highway and Lee Boulevard. The Luria brothers again used the architecture team of Satterlee and Lethbridge for this venture, which was to consist of 125 modern single-family dwellings, garden apartment buildings, duplexes, and a small shopping center. The combination of high-density buildings and single-family dwellings was a new concept. This new type of housing was called garden city planning and was praised for its progressive qualities.<sup>29</sup>

Pine Spring proved to be another fruitful venture for the team of Luria, Satterlee, and Lethbridge; however, this was the last time these four men would work together. Eli Luria moved to California after the completion of Pine Spring and continued his career in real estate development, which focused primarily on apartment buildings. Satterlee and Lethbridge completed four more projects for the Luria Brothers, including private residences for Eli and Gerald Luria, a medical office building, and an apartment building in Arlington. Following Pine Spring, Satterlee and Lethbridge designed houses for Charles Luria in the Lake Barcroft area in Northern Virginia.<sup>30</sup>

Hollin Hills, a post-World War II housing development in Northern Virginia consisting of 463 dwellings, is similar in design to Holmes Run Acres. Construction in Hollin Hills began between 1949 and 1954 after developer Robert

=====

Davenport purchased 300 acres of wooded land in Fairfax County.<sup>31</sup> Robert Davenport hired architect Charles Goodman and landscape architects Lou Bernard Voight, Dan Kiley, and Eric Papcke to design his new modern development. Davenport and Goodman wanted to build a neighborhood that was a departure from tract housing, incorporated elements of nature, and was affordable. Davenport even arranged for financing with modern furniture stores such as Knoll and Kurt Versen in Northern Virginia to help the residents of Hollin Hills create a modern dwelling both inside and out. The streets of Hollin Hills are curvilinear in design, and there is an absence of concrete curbs in the neighborhood. The elaborate landscaping and large lots make the homes of Hollin Hills appear as if they are set into the land instead of merely placed on it. The construction of the Hollin Hills home was fairly standard and incorporated the use of concrete slab floors and prefabricated materials. The last Davenport–Goodman designed house was constructed in Hollin Hills in 1971.<sup>32</sup> Like Holmes Run Acres, Hollin Hills received a great deal of press and accolades because of the developer's ingenuity of design.

The subdivisions of Pine Spring, Hollin Hills, and Holmes Run Acres are similar in design and a vast departure from traditional tract housing developments such as Pimmit Hills. The siting of the dwellings on the lots of land, the curvilinear layout of the streets, the attention to landscape design, and the introduction of elements of modern architecture to domestic structures are all common features of these neighborhoods. Pine Spring, Hollin Hills, and Holmes Run Acres were designed to be affordable housing composed of standard materials, and they used similar construction techniques. Pine Spring and Holmes Run Acres share the same developers and architects, and both contain neighborhood schools, the Pine Spring School and the Woodburn School. Another common characteristic among Pine Spring, Hollin Hills, and Holmes Run Acres is the presence of sympathetic additions to the original dwellings. The landscape design of Hollin Hills is somewhat mirrored in Holmes Run Acres. In fact, Lou Bernard Voight, one of the landscape architects for Hollin Hills, designed the finished landscape for Holmes Run Acres. Both Hollin Hills and Holmes Run Acres contain common parklands and recreation centers. However, these three subdivisions are not identical. Compared with Holmes Run Acres, the Pine Spring development possesses larger lots, bigger houses, better detailing, new one- and two-story plans, the presence of apartment buildings, and the absence of common parklands. Hollin Hills offered the prospective homebuyer a larger variety of design options than those available in Holmes Run Acres. The dwellings found in Hollin Hills possess more of a high-style architectural design than those in Holmes Run Acres; including dwellings with a Mies van der Rohe–inspired butterfly roof.<sup>33</sup>

While Holmes Run Acres appears to fit the definition of the “freeway suburb,” it does differ in two vital ways—the design of the neighborhood and the premise behind the design. The Luria Brothers were already familiar with what post-World War II subdivisions in America looked like, and they wanted to create something different. It is these qualities that make Holmes Run Acres a unique example of post-World War II community planning and architecture. Holmes Run Acres also possesses a strong community, with residents who realize the importance and exceptional value of the neighborhood they live in. Their participation and commitment to their neighborhood are the antithesis of many contemporary neighborhoods.

**Integrity**

The Holmes Run Acres neighborhood as a whole retains the ability to convey its significance as a planned community of homes of contemporary design. It retains its architectural integrity, including the aspects of location, design, setting, materials, workmanship, feeling, and association. The individual resources were also evaluated to determine if they contributed to the integrity of the proposed historic district. The houses in Holmes Run originally were

=====

designed with the potential for expansion. The post-and-beam design allowed relatively easy expansion and remodeling. Although expansion would generally indicate a lack of integrity, the additions and alterations in Holmes Run Acres still convey the original design philosophy and style of the original architects. Donald Lethbridge, one of the original architects, has acknowledged that expansion of the original homes was planned from the outset. One of the most typical expansions was the enclosure of the carport.<sup>34</sup>

Several criteria were used to determine whether the individual houses within the proposed district continue to convey their significance as a contemporary design. These included the compatibility of the design, materials, and workmanship of any addition or remodeling with the original house; the use of glass, an important feature of the original houses; the ability to discern the original part of the house; and the sympathetic lines of the addition. There are few houses in Holmes Run that have not sustained some type of addition or remodeling, especially the small, one-story homes. The carports have been enclosed, and both one-story and two-story sections have been added to the original houses. Those individual houses that are recommended as non-contributing resources include houses with an addition that either completely obscures the original house or the original lines of the house, or is so large and out of proportion to the original house that the addition(s) overwhelm it.

Verbal Boundary Description (Describe the boundaries of the property.)

The boundaries for the proposed Holmes Run Acres Historic District are shown on the accompanying County of Fairfax Public Works map dated 01-01-05. These boundaries include all three phases of Holmes Run including the school, the community recreation center, and Luria Park. They do not include the houses at the south end of Executive Drive nearest to its intersection with Gallows Road and two lots along Gallows Road. These areas contain houses that were constructed outside the period of significance and bear no relationship to Holmes Run in their design, materials, workmanship, setting, feeling, or association. These houses were built either before Holmes Run was developed or within the last 15 to 20 years.

Boundary Justification (Explain why the boundaries were selected.)

The boundaries were chosen to encompass the entire Holmes Run development, even though the last section developed has not yet reached the 50-year mark for resources eligible to the NRHP. The majority of the dwellings in Holmes Run Acres, in addition to the school, recreation center, and park, were constructed during the initial 1951–1952 period of development. The Gaddy addition of 71 homes was built in 1954–1955, and the Bodor section of 19 houses was completed in 1958. The resources that are less than 50 years of age in a historic district in which the majority of properties and the most important period of significance are greater than 50 years old do not need to qualify under Criterion Consideration G for exceptional significance. Therefore, the entire development has been included within the proposed boundaries.
